The MAILING DATE of this communication app Period for Reply	pears on the cover sheet with the c	orrespondence add	dress			
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).						
Status						
1) Responsive to communication(s) filed on 26 Ja	anuary 2004.

S. S. 1

DETAILED ACTION

Drawings

The drawings are objected to because numerous aspects of figures 1-6 are hand drawn. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheets should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Application/Control Number: 10/765,533

Art Unit: 2883

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Kristiansson (5,489,783). Kristiansson (5,489,783), hereinafter referred to as (Kristiansson), teaches an electron source (9) and corresponding method of operation comprising: a cathode (3) – either a cold (field emissive) or a thermionic filament may be employed (Col. 2, ll. 62-67) – enclosed by a evacuated vacuum envelope (1). When a cold cathode (3) is used, an electric field sufficient to cause an electron beam (21) to emit from the cathode (3) is applied circuitry. The emitted electron beam (21) moves through the evacuated envelope (1) and passes through a window (20) as it leaves the envelope (1) and irradiates an external object (6). (See e.g., Col. 2, Il. 48 – Col. 3, Il. 32)

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Takeda et al. (5,605,483) teaches, as is well known, that a field emission ebeam source is a type of a cold cathode source. (Col. 1, 1l. 19-25) Avnery (6,702,984) teaches a decontamination apparatus, wherein an electron beam generated from a source (e.g., 12), in an evacuated envelope, passes through a window (e.g., 12a) prior to decontaminating an object via ebeam irradiation. (See e.g., Col. 3, 11. 34-65) Rangwalla et al. (6,426,507) teaches an electron source in an evacuated envelope, wherein the resulting ebeam passes through a window prior to irradiation an object. (See, Col. 4, Il. 29-50 and Fig. 1) Allen (5,621,270) teaches an electron window for toxic remediation. (Abstract)

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James P. Hughes whose telephone number is 571-272-2474. The examiner can normally be reached on Monday - Friday 9am - 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frank Font can be reached on 571-272-2415. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
